

Materials Available for:
Unmeasured Investment and the Puzzling US Boom in the 1990s
by Ellen McGrattan and Edward Prescott

The main subdirectories for the auxiliary materials are

./DATA

./MODELS

./APPENDIX

There are ReadMe files to guide users through the subdirectories. These materials are also available at the Federal Reserve Bank of Minneapolis website.

The main file in the ./DATA subdirectory is accounts.m which loads in data from the national accounts, the flow of funds, and the Current Population Survey. It then constructs revised national accounts and time series to be used as inputs to the computer codes in ./MODELS. Full details of all calculations are in the appendix located in ./APPENDIX and also as Staff Report 395 at the Minneapolis Fed website.

The main files in the ./MODELS subdirectory are codes that generate the figures in the papers and the appendix. The two subdirectories have codes for the nonstochastic economies and the stochastic economies. The ReadMe files in the subdirectories provide detailed instructions for users interested in replicating our results or generating their own.
